Persona Design

Problem 4 | Voice AI Hackathon 2.0 | October 2026

Problem Statement

Problem 4 of 6 | Persona Design

CONTEXT
Rich seller data exists: profile, buy leads, past calls

GAP
One voice, one script for every seller

OBJECTIVE
A meeting with an IndiaMART executive

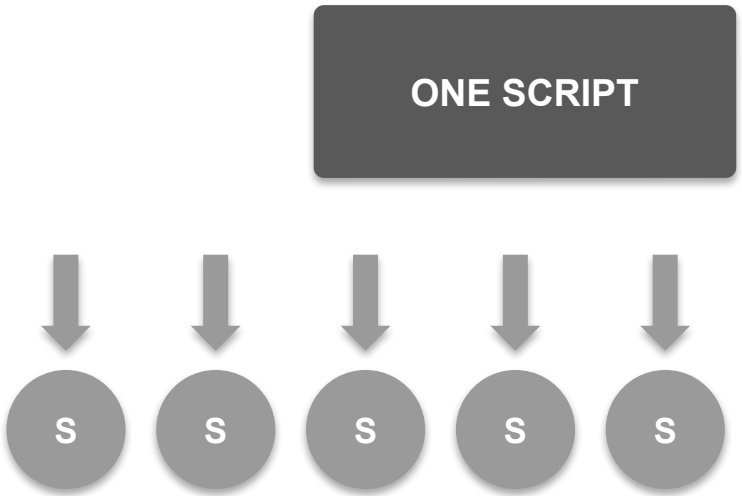

The persona is the bridge: built per seller, adapted live

11.5%

of 269,455 answered calls end in a meeting today

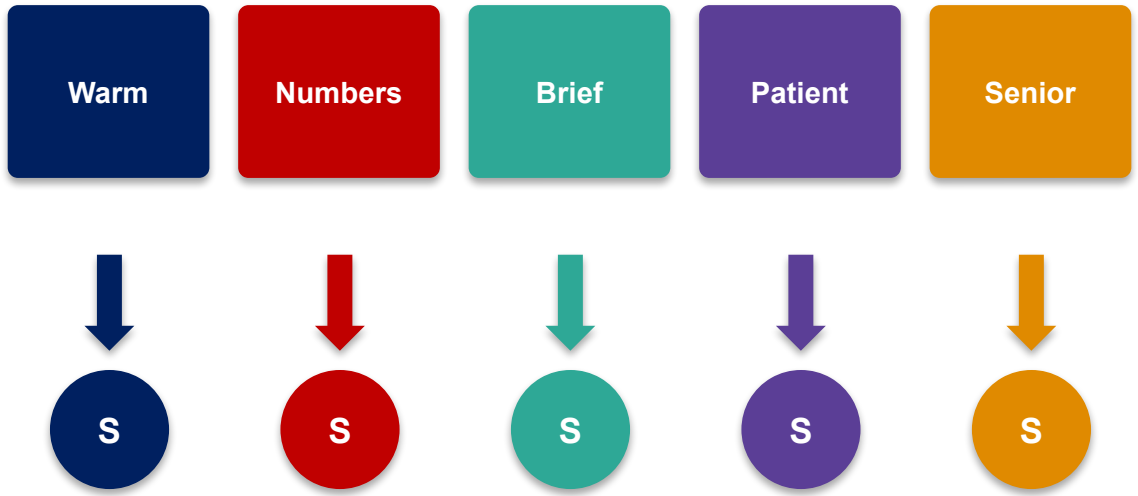

One Script vs A Persona Per Seller

Today

Same voice for everyone

With persona design

A different persona for each seller

26% to 14%

in transcribed calls (n = 11,834), a rush signal cuts the meeting rate

What We Read About Each Seller

Plan
free or paid

Location
language start

Buy leads
usage, quality

Past calls
mood, objections

Size
turnover band

SELLER

Similar sellers
same size, same category

Order value
vs category

Catalogue
quality score

Enquiries
rising or falling

Handler
assigned executive

62 data points from about 60 IndiaMART sources

Personal data removed before the model sees it: names become tokens, phone, GST and PAN never leave IndiaMART

7 Personas: How VANI Sounds

P0

Default
baseline for comparison

P1

Numbers-first
leads with one number: bigger sellers

P2

Warm local helper
own language, simple words: small towns

P3

Patient guide
short phrases, checks understanding

P4

Brief and busy-friendly
one short line, callback at once

P5

Problem-solver
acknowledges the complaint first

P6

Senior advisor
English-led, brief, never pushy

The agent picks one and tunes every field with a cited reason

Same Engine, Different Persona

Scoreboards
top 2 personas

Agent picks 1
from the seller's data

Tunes 12 fields
each with a cited reason

SELLER (illustrative)	PERSONA	HOOK	SOUNDS LIKE
Free seller, small town, Telugu region	P2 Warm local helper	Profile gap	Own language, simple words
Paid seller, many buy leads, always busy	P4 Brief and busy-friendly	Unused credits or money lead	One short line, callback offer
High-turnover owner, Delhi	P6 Senior advisor	Peer usage	English-led, numbers, brief
Seller with an open complaint	P5 Problem-solver	Resolve grievance	Acknowledges first, no pitch

8 Hooks: Why Should The Seller Meet Us

Money lead
a real order with its value

Profile gap
photos and prices missing

Category demand
buyers asking in your category

Unused credits
paid for leads, not using them

Lead quality fix
set filters for the right buyers

Enquiry drop
enquiries fell vs last quarter

Peer usage
similar sellers buy leads

Resolve grievance
own the complaint first

One main hook plus a backup per seller. Every number comes from the seller's data.

The Agent Decides

A RULE TABLE

same input, same output
if small and free then persona 2

OUR AGENT

62 data points
this seller only

→ **Scripts**
facts, eligibility, guards

→ **Scoreboards**
top 2 personas, weighted draw

→ **Agent judges**
persona, hook, 12 fields

→ **Validator**
refuses anything uncited

Picks the persona
from the data, not a lookup

Picks the hook
one main, one backup

Reads this seller's own words

Cites the evidence
a quote for every choice

Can override the draw
if the data says so

Two sellers with the same plan can get different personas and hooks, because the agent reads what each one's data says

The Skill: How The Agent Decides

FOR EVERY FIELD AND HOOK, THE AGENT CHOOSES A REASON IN THIS ORDER

1. **Seller evidence**
   an exact quote from this seller's own data
2. **Earlier calls**
   what got meetings for similar sellers, only if no evidence
3. **Persona default**
   the selected persona's own value

THE SKILL, STEP BY STEP

Read the seller → Pick base persona → Search the files → Decide each field → Pick hook and backup → Write the words → Finalize

The skill is a file the agent follows. A writer tool and validator enforce it: the agent cannot write a persona any other way

Searches come before decisions; every rejected hit needs a written reason

One Call: Start, Mid-Call, End, Improve

START
Persona is set

- Voice, pace, pitch
- Start language
- Opening line and hook

MID-CALL
It listens every turn

- Rushed: shorter
- Confused: simpler
- Irritated: apologises
- Language switch: follows

END
Meeting booked

- Day and time agreed
- With the sales handler, or our executive
- Then: anything else?
- Or a callback

IMPROVE
Every call teaches

- Review the call, rule checks R1-R6
- Score persona and hook
- Better pick next time

The improvement loop feeds the next call's persona and hook

Mood decision: instant keyword tool in-call, plus Jev decision model (6 mood questions, ~0.5 s) to label real calls and check the tool

Mid-Call: Same-Turn Adaptation

SELLER SAYS	VANI DOES
“Nahi chahiye”	Stays on the line, restates the hook
“I'm busy right now”	One short sentence, offers a callback
“Samajh nahi aaya”	One idea, simple short phrases
“Kitni baar call karoge!”	Brief apology, stops the pitch
Speaks Marathi, then Hindi	Replies in the seller's language
“Who handles my account?”	Names the handler and books with them; a team if none

Mood Engine: Two Layers

Seller turn
what was just said

Keyword tool: instant
Reads Hindi, Hinglish, Marathi, Telugu and more
Under 1 ms, same-turn directive

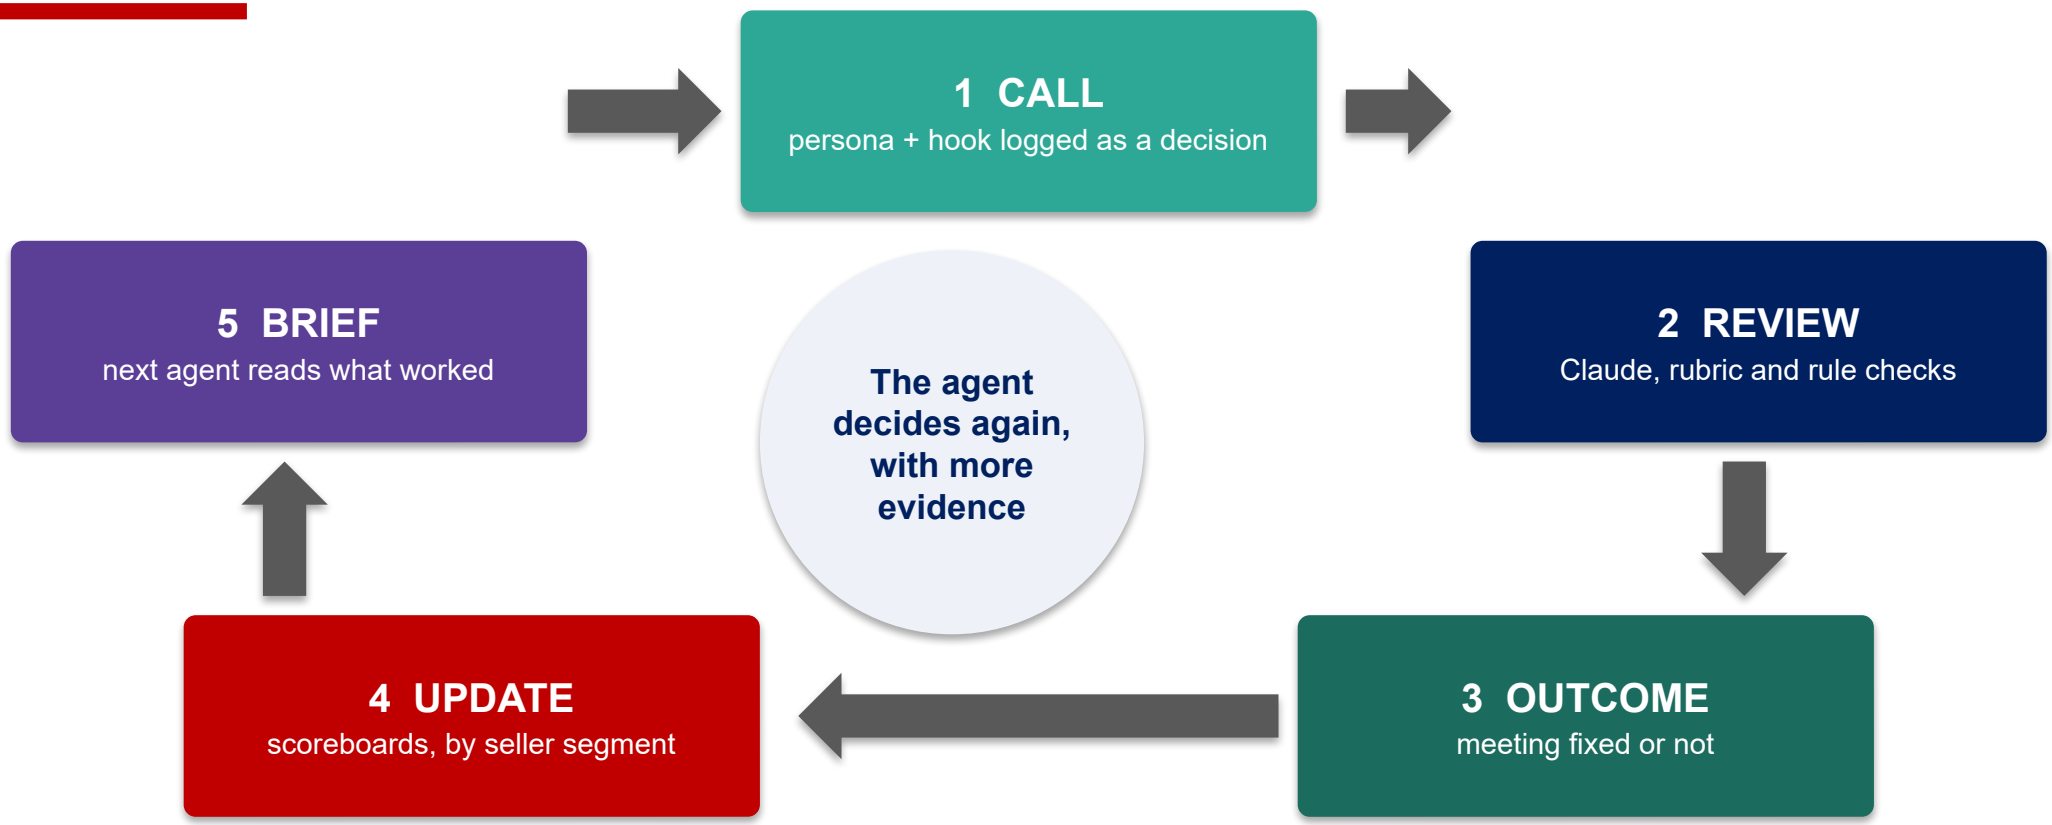

MODE + DIRECTIVE
in the call, same turn
VANI changes how it speaks

Jev decision model: after the call
Judges the same turns on real calls: 6 mood questions at once
49 of 51 correct in tests; tested live via a relay

LABELS
after the call
score and improve the keyword tool

Keyword tool answers in the call; Jev judges the same turns after the call and teaches it

The Self-Learning Loop

No retraining and no hand-tuning: the scoreboards move on every call. A person approves any change to the library or the keyword tool

What The Loop Learns

Which persona
per seller segment

Which hook
per seller segment

Which field values
pace, language, empathy, words

Meeting fixed?

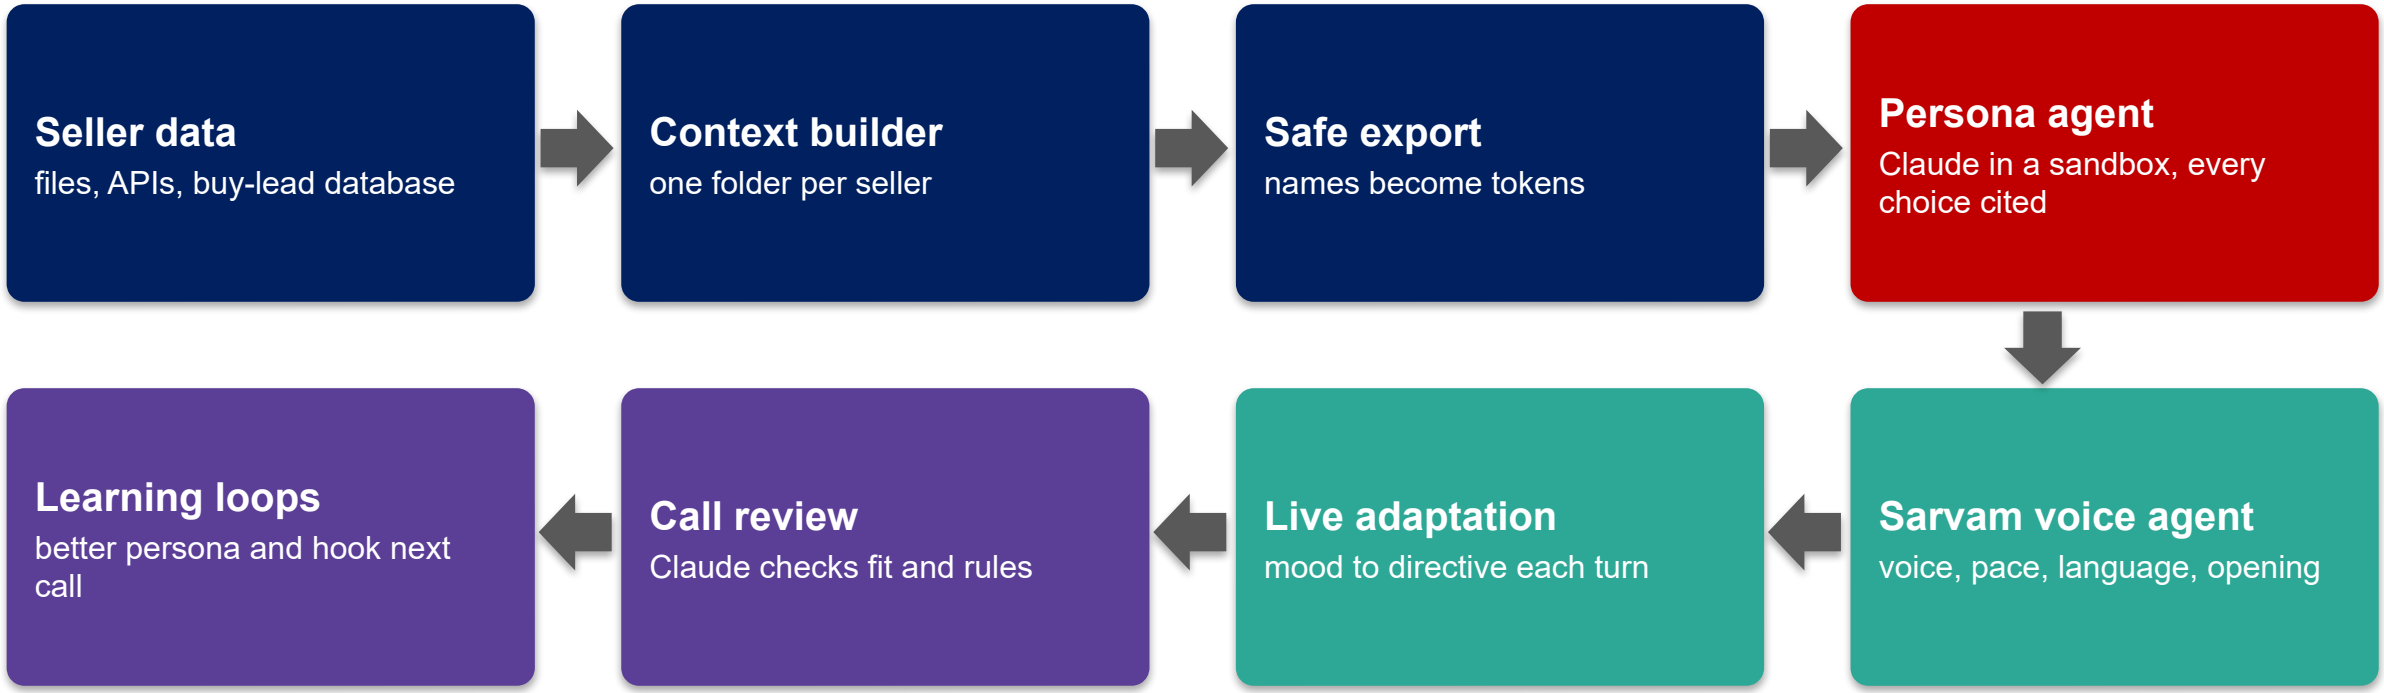

Which reason type
evidence beats default?

Which start rule
do our defaults help?

Real uplift
against a control persona

Every call credits the persona, the hook and each field the agent chose, with the reason it gave

Our Architecture

Safety rails: never AI, bot or manager; never claims to be human | numbers only from verified facts | names stay tokens in the sandbox | no price on the call

Future Goals

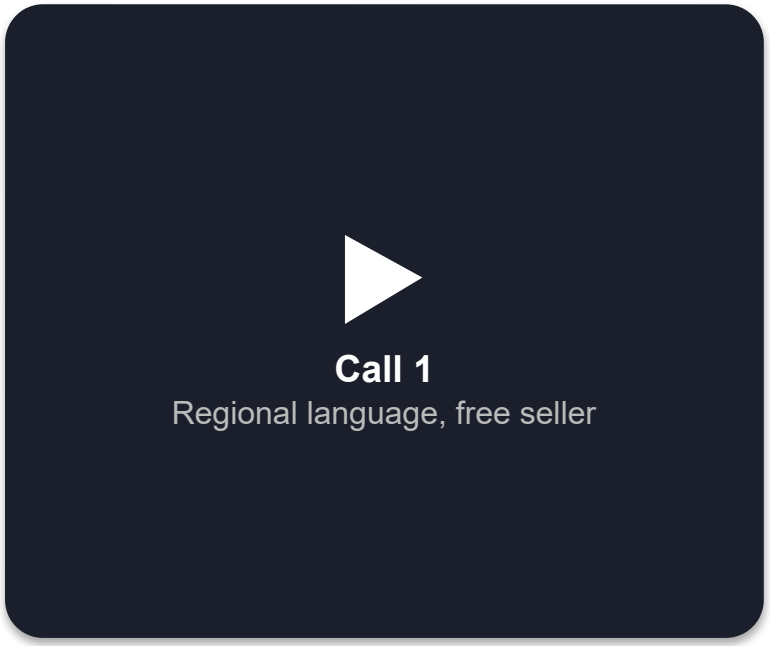

NOW: Meeting arrangement
Right persona and hook, live adaptation

NEXT: Seller enrichment
Catalogue improvement and suggestions

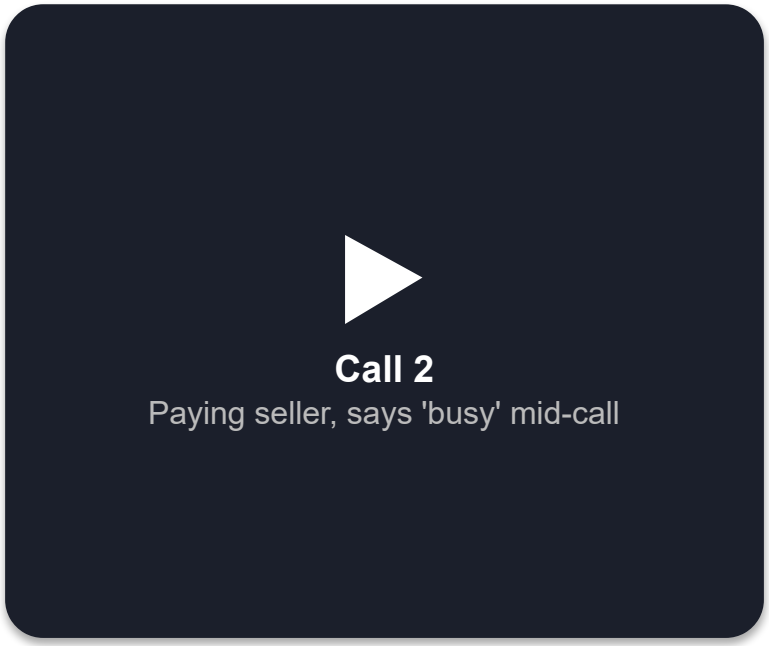

Personalise further, per seller

1. **Objective per seller**
   Meeting, enrichment or NPS
2. **Preferred call time**
   More calls answered
3. **Preferred language**
   Suggested from the seller's data

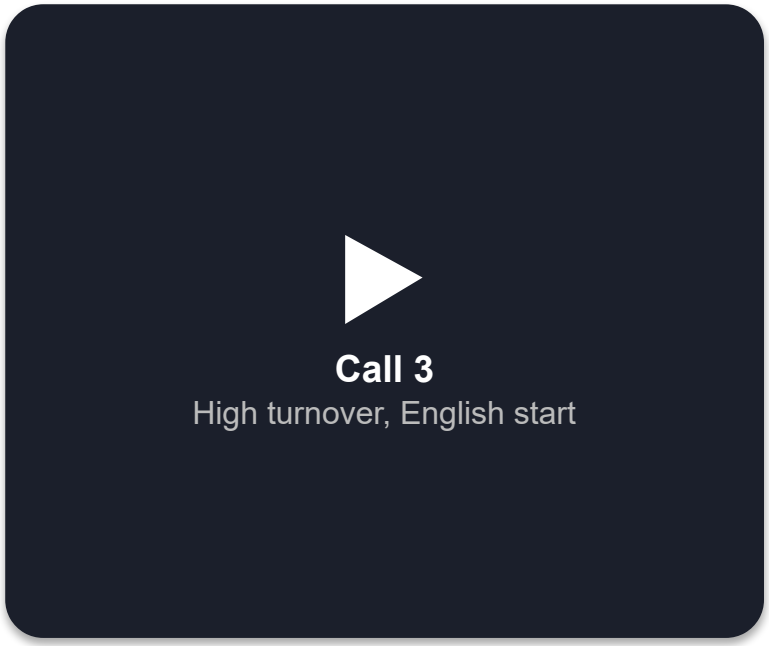

Demo: Live Calls

Call 1
Regional language, free seller

Call 2
Paying seller, says 'busy' mid-call

Call 3
High turnover, English start

Each call: persona spec with reasons, a live mid-call switch, the switch log

Thank You!
