Persona Design

Problem 4 | Voice AI Hackathon 2.0 | October 2026

Problem Statement

Problem 4 of 6 | Persona Design

CONTEXT
Rich seller data exists: profile, buy leads, past calls

GAP
One voice, one script for every seller

OBJECTIVE
A meeting with an IndiaMART executive

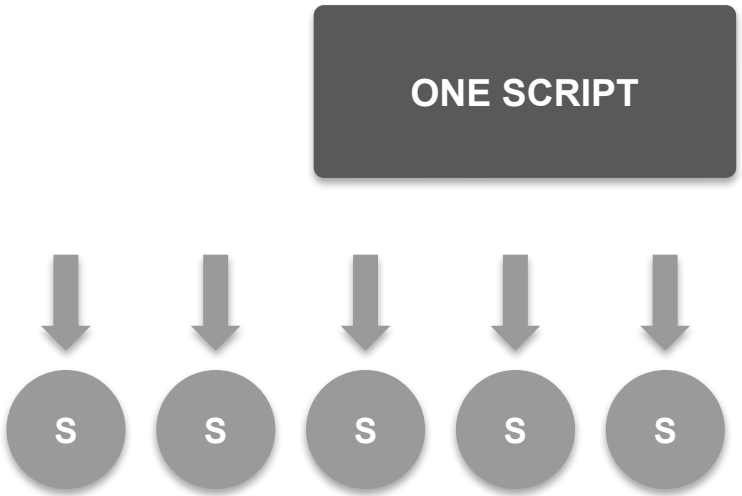

The persona is the bridge: built per seller, adapted live

11.5%

of 269,455 answered calls end in a meeting today

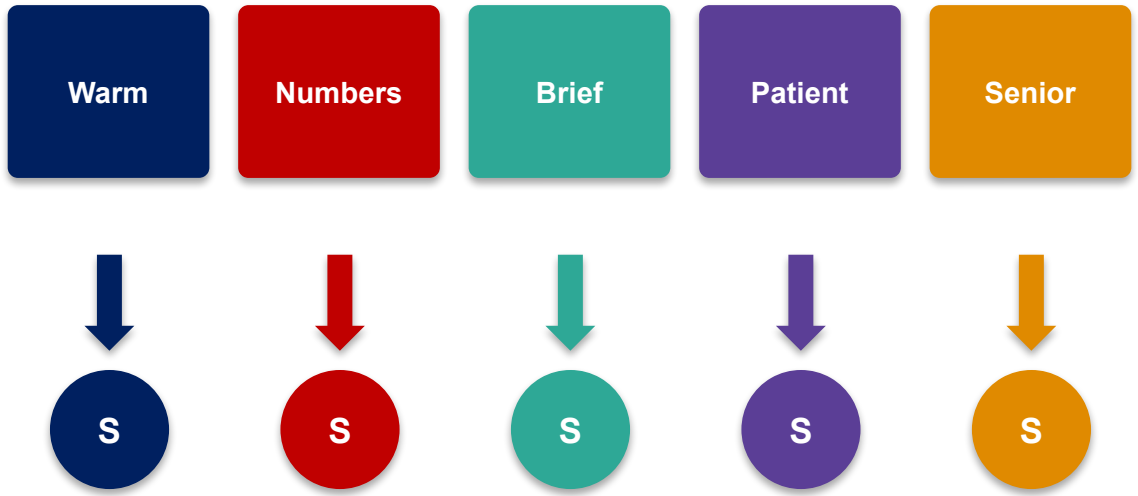

One Script vs A Persona Per Seller

Today

Same voice for everyone

With persona design

A different persona for each seller

26% to 14%

in transcribed calls (n = 11,834), a rush signal cuts the meeting rate

What We Read About Each Seller

Plan
free or paid

Location
language start

Buy leads
usage, quality

Past calls
mood, objections

Size
turnover band

SELLER

Similar sellers
same size, same category

Order value
vs category

Catalogue
quality score

Enquiries
rising or falling

Handler
assigned executive

50+ data points per seller feed the persona and the hook

7 Personas: How VANI Sounds

P0

Default

baseline for comparison

P1

Numbers-first

leads with one number: bigger sellers

P2

Warm local helper

own language, simple words: small towns

P3

Patient guide

short phrases, checks understanding

P4

Brief and busy-friendly

one short line, callback at once

P5

Problem-solver

acknowledges the complaint first

P6

Senior advisor

English-led, brief, never pushy

The agent picks one and tunes every field with a cited reason

8 Hooks: Why Should The Seller Meet Us

Money lead
a real order with its value

Profile gap
photos and prices missing

Category demand
buyers asking in your category

Unused credits
paid for leads, not using them

Lead quality fix
set filters for the right buyers

Enquiry drop
enquiries fell vs last quarter

Peer usage
similar sellers buy leads

Resolve grievance
own the complaint first

One main hook plus a backup per seller. Every number comes from the seller's data.

One Call: Start, Mid-Call, End, Improve

START
Persona is set

- Voice, pace, pitch
- Start language
- Opening line and hook

MID-CALL
It listens every turn

- Rushed: shorter
- Confused: simpler
- Irritated: apologises
- Language switch: follows

END
Meeting booked

- Day and time agreed
- With the sales handler, or our executive
- Then: anything else?
- Or a callback

IMPROVE
Every call teaches

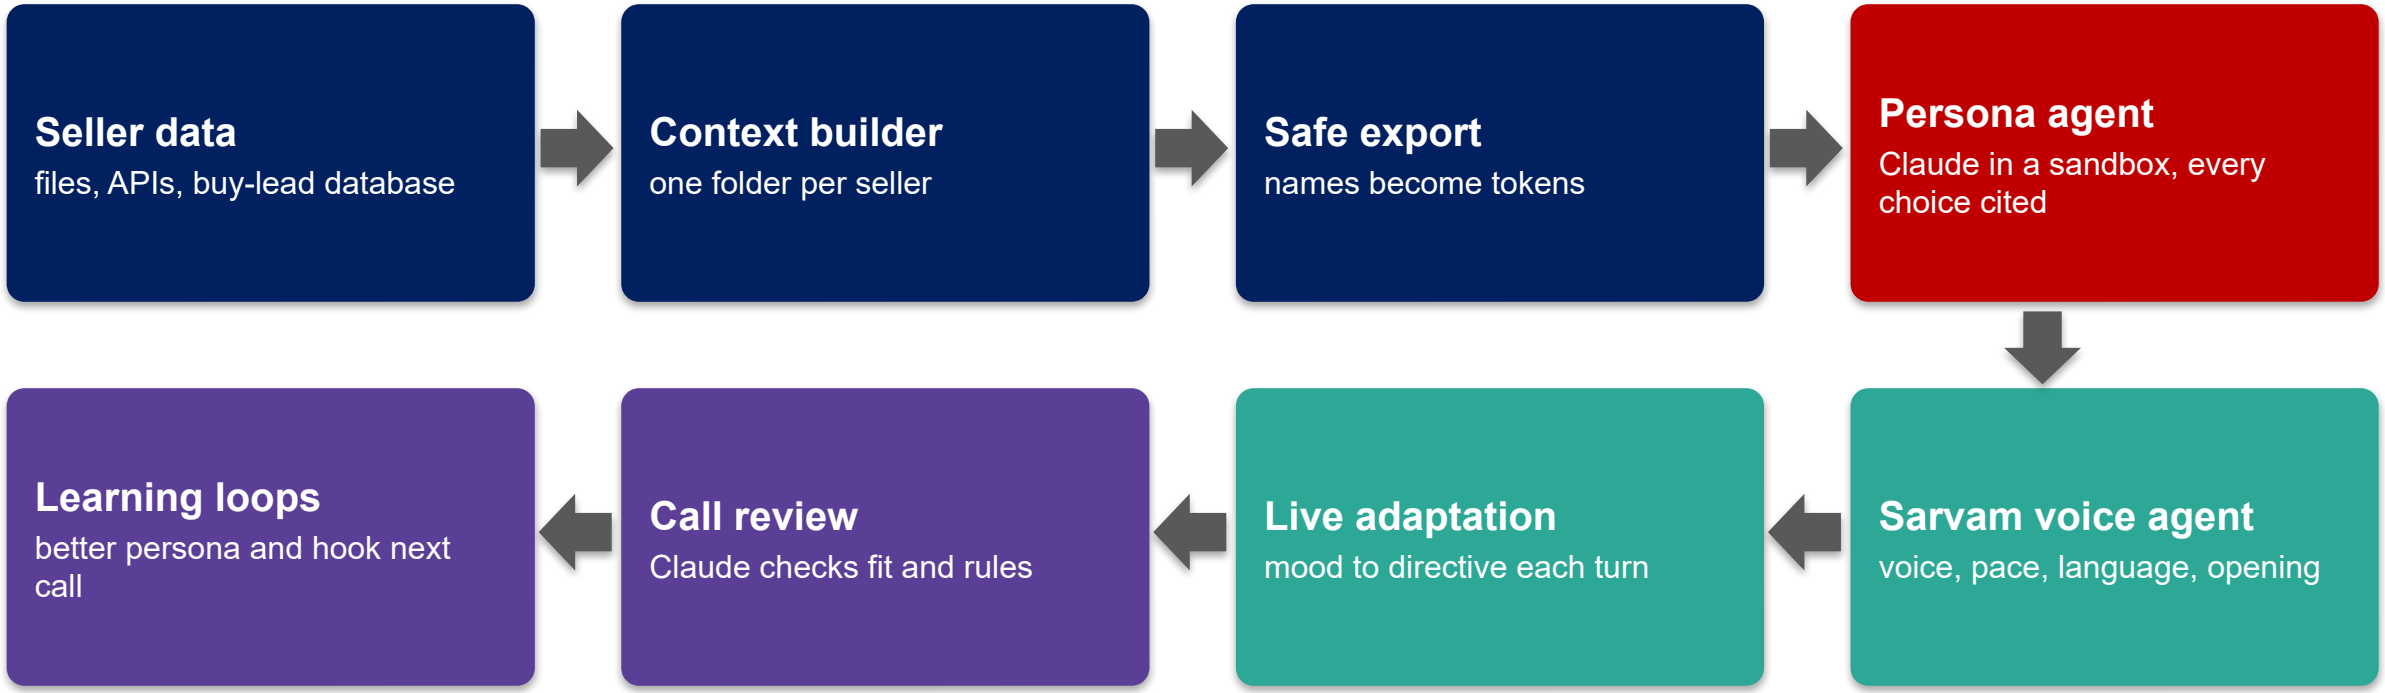

- Review the call, rule checks R1-R6
- Score persona and hook
- Better pick next time

The improvement loop feeds the next call's persona and hook

Mid-Call: Same-Turn Adaptation

SELLER SAYS	VANI DOES
“Nahi chahiye”	Stays on the line, restates the hook
“I'm busy right now”	One short sentence, offers a callback
“Samajh nahi aaya”	One idea, simple short phrases
“Kitni baar call karoge!”	Brief apology, stops the pitch
Speaks Marathi, then Hindi	Replies in the seller's language
“Who handles my account?”	Names the handler and books with them; a team if none

Our Architecture

Safety rails: never AI, bot or manager; never claims to be human | numbers only from verified facts | names stay tokens in the sandbox | no price on the call

Future Goals

NOW

Meeting arrangement
Right persona and hook, live adaptation

NEXT

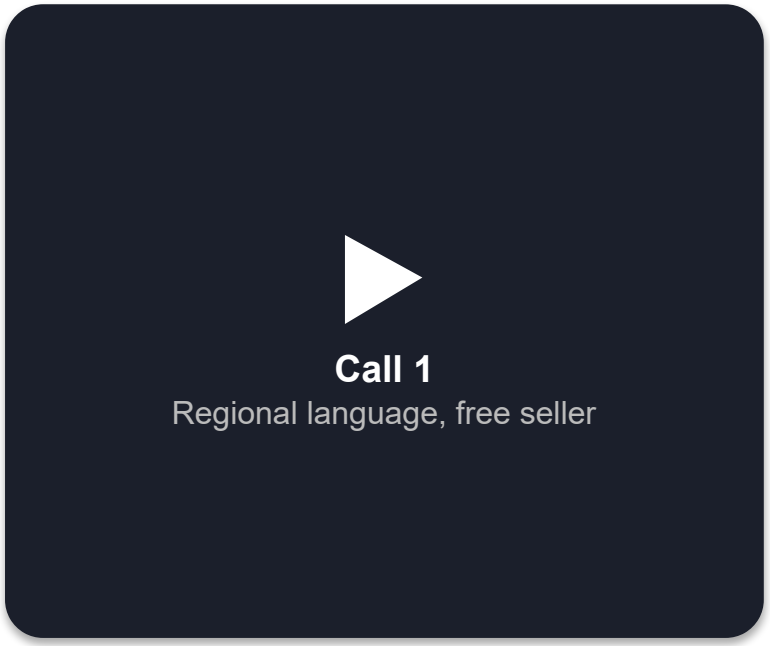

Seller enrichment
Catalogue improvement and suggestions

LATER

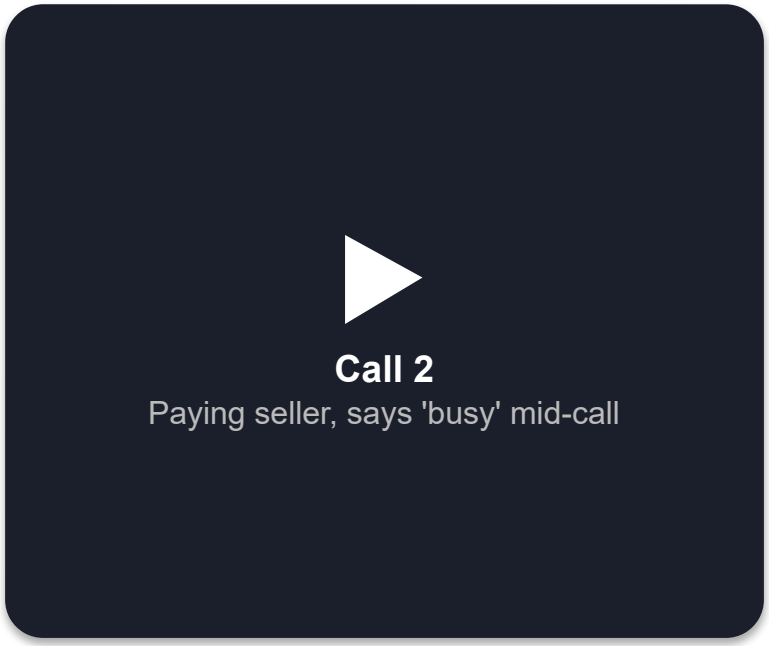

Higher packages
Upsell and renewal, same engine

More languages and voices | learning from real calls | production telephony

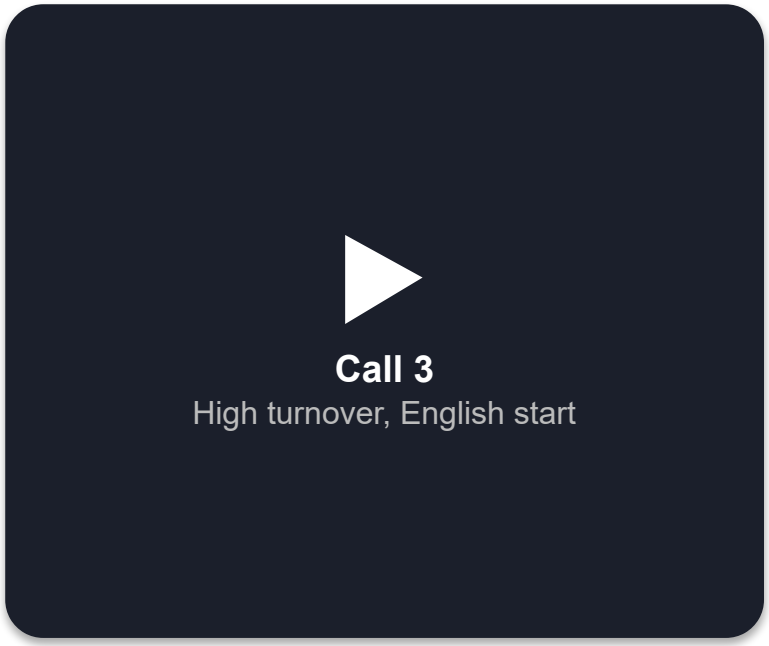

Demo: Live Calls

Call 1
Regional language, free seller

Call 2
Paying seller, says 'busy' mid-call

Call 3
High turnover, English start

Each call: persona spec with reasons, a live mid-call switch, the switch log

Thank You!
